

BUDGET CLOSET

Getting ready for Installation Day

Thank you for choosing Budget Closet for your storage project. Our goal is to make your installation run as smoothly as possible. In our 20 years of business, we have learned that preparation in the following matters can make a huge difference in the quality of your installation experience.

Entry Instructions:

Please notify us of any special circumstances we may encounter when arriving to install your systems. Alarm codes, pets, sprinklers, phone numbers for neighbors who will be letting us in, etc.

Preparation of installation areas:

The construction materials are often quite large so we will need a clear path to each work area. We always use moving pads in sensitive areas to protect your home.

Please have your closets cleared of their contents.

If we are removing an existing system, we can do touch up painting as long as you have some paint available. We will provide the paint brushes and other tools.

Please confirm the location of accessories such as belt/tie racks and valet rods with your designer prior to installation. If no location has been confirmed, our crew will place the item at their discretion, or if you prefer we can leave the item and hardware for you to install yourself.

When we finish:

Please inform us of any specific instructions when leaving your residence, i.e., should we leave the key under the mat or on the kitchen table? Do we need to set the alarm? Let the dogs out? Just let us know.

Thanks for helping us ensure that you have a quality installation experience!
